Does FGX-Web support SSL/TLS connections to databases?

Dario Susman - 2021-10-29 - Comments (0) - Database

Unfortunately, TLS/SSL database connections are not currently supported by our database scanner and implementing such a feature is not in our current roadmap for 2020.

We are at the very early stages of feasibility analysis and if the feature does enter the road map, current estimations indicate we would be able to begin rolling it out no earlier than Q2 2022.

Our apologies for this inconvenience.
