Missing Framework Patches have been found; what does this mean and how can this be resolved?

rdavis@foregenix.com - 2020-05-07 - Comments (0) - FGX Web Lite

It means that your website is vulnerable to attack and should have these latest patches applied to it ASAP.

WebScan will often provide you with the information you need to fix these vulnerabilities. It will also provide you with links to resources on the internet to help. This information should be passed onto your web developers who should be able to apply patches to the framework.
