

Security headers are showing there may be a leak, should I be worried?

rdavis@foregenix.com - 2020-05-14 - Comments (0) - FGX Web Lite

It is advisable to hide all security headers as they can give hackers information that could help them plan an attack on your website.

You should check with your web developers to confirm they are aware of these exposed headers, in most cases they should be able to remediate these and prevent them from being publicly displayed.
