The Website Overview has detected Bad Headers. What are they and how can this be resolved?

rdavis@foregenix.com - 2020-05-14 - Comments (0) - FGX Web Lite

This means that the server hosting your website is providing information about itself. This information can tell a would be hacker what operating system the server is using and what programming language your website is written in. This information can be used as a starting point for an attack on your website.

You should check with your web developers to confirm they are aware of these exposed headers, in most cases they should be able to remediate these and prevent them from being publicly displayed.
