

What are the requirements for the PHP Seal?

rdavis@foregenix.com - 2020-03-30 - Comments (0) - PHP

If you are running PHP on your webserver and are looking to install the PHP seal then there are some requirements which must be met in order for a successful validation. The list of the PHP modules that are required to be installed and active on the web server can be found below:

- JSON
- xmlwriter
- mbstring
- xml
- hash
- pcre
- SPL
- pdo_mysql
