What are the server requirements to run the Magento plugin?

rdavis@foregenix.com - 2017-01-24 - Comments (0) - Magento

If you are running PHP on your webserver and are looking to install the Magento seal then there are some requirements which must be met in order for a successful validation. The list of the PHP modules that are required to be installed and active on the web server can be found below:

- JSON
- xmlwriter
- mcrypt
- mbstring
- xml
- hash
- pcre
- SPL
