

What is Malware and how can it affect my site?

rdavis@foregenix.com - 2020-05-06 - Comments (0) - FGX Web Lite

Malware is a piece of software that is placed on your website that is there to steal information from your customers.

This could be Credit/Debit card information or just their personal information.

The loss of this type of information can be a financial issue or could end up in your website being **blacklisted** so that your customers can no longer access your site to make purchases, etc.
