

How does the scoring work?

rdavis@foregenix.com - 2020-05-06 - Comments (0) - FGX Web Lite

WebScan gives your website a score out of 10 where 0 is minimal risk and 10 is maximum risk.

Each vulnerability we discover on your website is given a score from 0 to 10.

We then take the maximum score across all vulnerabilities we discover as the score for your website.

Your website security is only as good as the weakest point.
