

My site has received a Low-Risk score. Can I ignore, or is it best to rectify?

rdavis@foregenix.com - 2020-05-06 - Comments (0) - FGX Web Lite

There is always room for improvement in your website security.

Even though you received a low score it is always best to resolve any issues identified.

It's good to remember that WebScan does **not** look for internal vulnerabilities, which means your website could still be at risk.
