FOREGENIX

What are Framework Patches and what does this mean and how does it affect my site?

rdavis@foregenix.com - 2020-05-07 - Comments (0) - FGX Web Lite

Framework patches are a culmination of security patches and bug fixes that Frameworks provide to customers to update their websites to ensure they are as secure as possible.

WebScan will often provide you with the information you need to fix these vulnerabilities. It will also provide you with links to resources on the internet to help. This information should be passed onto your web developers who should be able to apply patches to the framework.
