

What Information will the Database Card Scanner Provide?

rdavis@foregenix.com - 2017-01-05 - Comments (0) - Database

When the Card scanner for the database has completed a scan it will provide you with the following information:

- The first **6 digits** of the **card number** that has been flagged
- The **database** that the card number has been found in
- The **table** it has been found in
- The **column** in the table the card has been found

This information will make it easy and quick to verify if the card number flagged is a true card number and not a tracking number.
